

## Press release

### BANKSapi convinces the globally fastest growing cloud ERP, Haufe X360 relies on the Open Banking platform of BANKSapi

- With Haufe X360, one of the leading German ERP companies and the globally fastest growing cloud ERP relies on BANKSapi's Open Banking solution.
- All financial data is displayed in real time on the Haufe X360 liquidity planning dashboard.
- BANKSapi expands its Open Banking range of services with EBICS interfaces and classification of turnover for corporate customers.

**Munich, 19.04.2021:** BANKSapi Technology, one of the leading Banking-as-a-Service providers in the German market, is continuing to drive forward the expansion of its range of services: as one of the first German ERP solution providers, Haufe X360, a company of the Haufe Group SE, from Freiburg, is integrating the Open Banking and EBICS solution of BANKSapi into its digital offering. The integration is fully embedded and fits seamlessly into Haufe X360's SaaS solution.

Through its cooperation with BANKSapi, Haufe X360 provides its customers with state-of-the-art liquidity management. Haufe X360 helps its clients to maintain an overview of their finances -simply, digitally and conveniently. Through the technical connection, clients can link their accounts directly to Haufe X360. Incoming and outgoing payments are automatically reconciled. BANKSapi's Open Banking platform enables fast, secure and universal access to bank data for real-time decision-making with just one API.

When selecting a suitable full service partner, the combination of Open Banking, a powerful data science platform and connected EBICS interfaces was particularly decisive for Haufe X360.

"With BANKSapi, we have brought a new partner on board who will give Haufe X360 further boost and optimally expand our range of services. Because with the seamless integration of the Banking-as-a-Service solution BANKSapi into our ERP system, we offer our customers real added value by enabling them to handle their payment processes faster and to have data-based liquidity planning in real time. And in today's digitalized world with its rapid, often disruptive developments, this is more necessary than ever before in order to survive sustainably on the market in the long term," says Carsten Schröder, President of Cloud ERP at Haufe.

"In a fast-paced, digitalized world, liquidity planning is more important than ever. The basis for this is reliable and analyzable data. Haufe X360 provides SMEs with a holistic overview and real-time cash flow management. We are pleased to be part of this success story and to optimally support Haufe X360 with our range of services" adds BANKSapi co-founder and managing director Jan Wichmann.

## About BANKSapi Technology GmbH

BANKSapi Technology GmbH is a BaFin-regulated open banking provider based in Munich and Kiel. The B2B Company provides an API after the integration of which users and companies can access their accounts, credit cards, building society contracts and securities accounts via the front-end applications of the licensees.

The sophisticated AI and Data Science platform is integrated deeply in the product and provides high-value digital customer insights based on the account data for B2B2B as well as B2B2C clients.

Target groups such as banks, insurance companies, distributors, ERP and accounting providers, credit platforms and payment providers are thus given the opportunity to give users an overview of finances, to streamline processes and to develop innovations that improve the financial lives of end customers.

The technology is hosted in noris network's German high-security data center and meets the highest standards of data protection and IT security. BANKSapi Technology GmbH is backed by a team of founders and the company builder Finconomy AG.
